A dry and wet separation lithium battery station cabinet

What is a lithium ion battery separator?The cells of a lithium-ion battery also contain separators that keep the anodes and cathodes, or positive and negative poles, from touching each other. If a piece of metal gets too close to the separator, it can puncture the separator and cause a short circuit. Why do NMC batteries use wet separators?China produces around 80% of the world's separators. Out of these, 70% are wet process separators and 30% are process separators. As NMC battery are targeting higher energy density, manufacturers are mostly using wet separators. This is due to wet separators are 30%-40% thinner than dry separators, it can save more space for other components.
