Battery pack calculator : Capacity, C-rating, ampere, charge For a given capacity, C-rate is a measure that indicate at what current a battery is charged and discharged to reach its defined capacity. Max discharge current for AGM Battery bank Oct 14, So, is there a rule of thumb for a max safe discharge current for (AGM in my case) Lead Acid Batteries? My gut feeling is that 300A for an hour on a 600Ah bank should be safe. A Guide to Understanding Battery Specifications Dec 18, A C-rate is a measure of the rate at which a battery is discharged relative to its maximum capacity. A 1C rate means that the discharge current will discharge the entire Battery discharge current Dec 21, The discharge current may alternatively be expressed as a multiple of the rated discharge current. For example, if the battery is specified at the 10 hour rate, $I_{10} = C/10$ batteries Nov 12, Maximum continuous discharge current sounds like what is the maximum drain current that will remain safe on the battery without "abusing" it and thereby shortening battery life.
